info@perintosh.com

Introduction:

This program equips participants with the knowledge and skills to safely handle, store, and dispose of chemicals in the workplace. It emphasizes hazard identification, risk control, regulatory compliance, and emergency response to prevent accidents, injuries, and environmental contamination.

Training Methodology:

Interactive lectures, case studies, hands-on practical exercises, demonstrations, group discussions, and competency assessment.

Objectives:

- Understand the properties, hazards, and classification of chemicals
- Learn safe handling, storage, and disposal practices
- Apply risk assessment and control measures for chemical safety
- Respond effectively to chemical spills, exposure, and emergencies

Benefits:

- Reduce chemical-related accidents and injuries
- Improve compliance with regulatory requirements (GHS, OSHA, DOSH)
- Enhance competency in risk assessment and safe chemical handling
- Promote a proactive chemical safety culture in the workplace

Course Outline

Introduction to Chemical Safety

- Chemical types, hazards, and safety responsibilities

Chemical Hazard Communication

- GHS, SDS, labels, and chemical safety responsibilities

Safe Handling & Storage

- Safe handling, storage control, and PPE requirements

Spill Response & Emergency Procedures

- Spill control, first aid, fire prevention, and emergency response

Practical Exercises

- SDS interpretation, chemical handling practice, and hazard control discussion
